Name: Shweta Ashok Patil

Branch: CSEDS

Division:SE3

Roll no:12

Experiment no:1

Aim : Install XAMPP / WAMP. Install Git and set up a new repository. Learn fundamental Git commands: add, commit, modify, view. Create and manage branches for version control.

Instructions:

1. Install XAMPP

2. Install Git. Create account in GitHub.

3. Go through the git_github pdf file and execute 4/5 git commands.

4. Take snapshot of git commands and your github account page. Save these in one docx file.

Create pdf and upload it as submission part.

Git commands executed in Git bash:

1. **Checking the Installed Git Version Using git –version**

2. **Initializing a New Git Repository Using the git init Command**

3. Checking the Current Repository Status Using git status

```
shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ git status
On branch master

No commits yet

Untracked files:
  (use "git add <file>..." to include in what will be committed)
        Firefox.exe
```

4. Configuring Global Username and Email Using Git Config Commands

```
shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ git config --global user.name "Shweta Patil"

shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ git config --global user.email "shweta1909patil@gmail.com"

shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ git config --global --list
user.name=Shweta Patil
user.email=shweta1909patil@gmail.com
```

5. Creating a File Using the Echo Command

```
shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ echo "Hii"> File1.txt
```

Adding a File to the Staging Area Using git add and Resolving the warning using core.autocrlf configuration

```
shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ git add File1.txt
warning: in the working copy of 'File1.txt', LF will be replaced by CRLF the next time Git touches it

shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ git config --global core.autocrlf true
```

Verifying the file status using git status

```
shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ git and File1.txt
git: 'and' is not a git command. See 'git --help'.

The most similar command is
        add

shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ git status
On branch master

No commits yet

Changes to be committed:
  (use "git rm --cached <file>..." to unstage)
        new file:   File1.txt
```

6.Executing the first commit using git commit

```
shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$ git commit -m "First Commit"
[master (root-commit) 3c54636] First Commit
 1 file changed, 1 insertion(+)
 create mode 100644 File1.txt

shweta@LAPTOP-KR7AC5N9 MINGW64 ~/OneDrive/Desktop (master)
$
```
