Name: Shweta Ashok Patil

Branch: CSEDS

Division:SE3

Roll no:12

Experiment no:3

Aim: Building a simple counter app

Code:

```
import React, { useState, useEffect } from 'react';

function App() {
  // 1. useState: This creates the 'count' variable and the function to change it
  const [count, setCount] = useState(0);

  // 2. useEffect: This handles the "side effect" of updating the browser tab title
  useEffect(() => {
    document.title = `Count is ${count}`;

    // This console log helps you see the effect working in the Inspect tool
    console.log("The count changed to:", count);
  }, [count]); // The [count] array tells React: "Only run this when 'count' updates"

  return (
```

```
<div style={{ textAlign: 'center', marginTop: '50px', fontFamily: 'Arial' }}>
  <h1>Simple Counter App</h1>

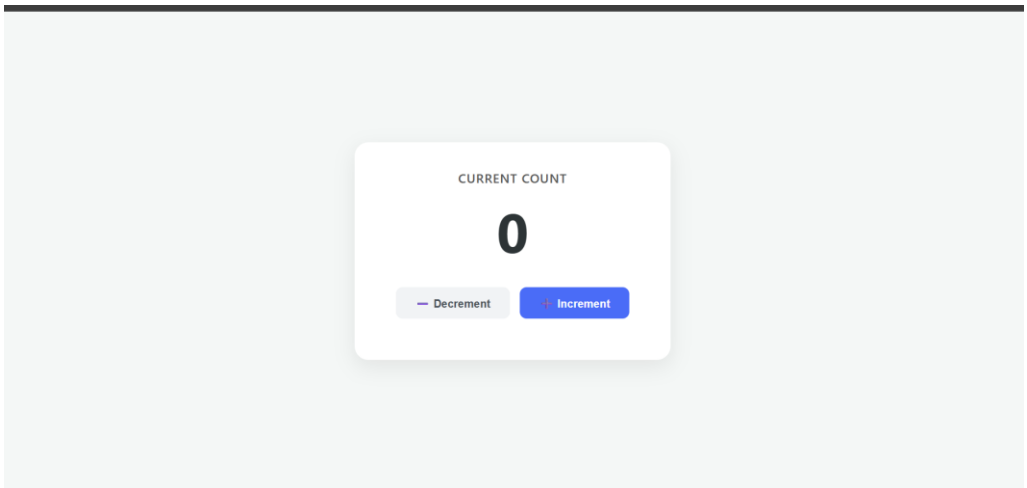
  <div style={{ fontSize: '40px', margin: '20px' }}>
    {count}
  </div>

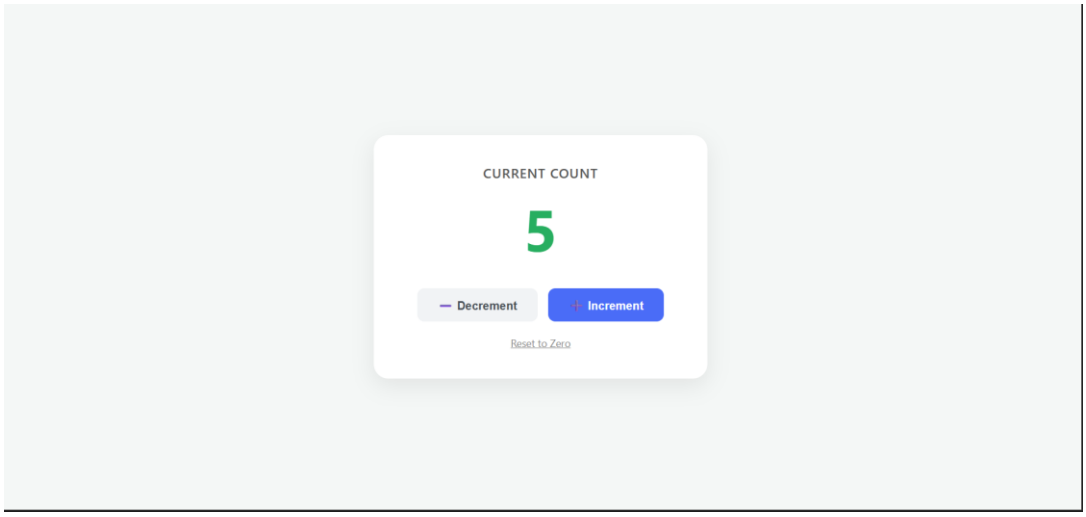
  <button
    onClick={() => setCount(count + 1)}
    style={{ padding: '10px 20px', fontSize: '16px', cursor: 'pointer' }}
  >
    Increment
  </button>

  <button
    onClick={() => setCount(count - 1)}
    style={{ padding: '10px 20px', fontSize: '16px', cursor: 'pointer', marginLeft:
'10px' }}
  >
    Decrement
  </button>

  <button
    onClick={() => setCount(0)}
    style={{ display: 'block', margin: '20px auto', color: 'red' }}
```

```
    >
      Reset
    </button>
  </div>
 );
}

export default App;
```




Output:
